

Hempaline

Trusted in challenging environments

Trusted in challenging environments

From the largest power stations to the busiest oil and gas facilities, our linings protect your assets against corrosion in some of the most challenging and aggressive environments.

Designed specifically for the power and oil and gas industries, Hempaline linings offer superior performance against extreme abrasion, high temperatures, chemical resistance and pH swings.

The linings are designed for tanks, ductwork, process vessels and flue gas desulphurisation units.

Hempaline linings may be applied to steel as well as concrete.

Hempaline maximises the protection of profits and assets and minimises the risk of production disruptions, through fast return to service and long service life. When you choose Hempaline, you can be sure you will get outstanding return on your investment.

Our history is rooted in protective coatings for the extreme conditions experienced in the Marine and Protective industries, where we have delivered trusted technology and service for many years.

We combine our extensive knowledge of your particular business with a focus on the linings challenges you face. This allows us to provide you with the best service solutions, extending the life cycle of your assets.

The Hempaline advantage

We understand aggressive environments that include extreme pH swings, high abrasion and temperatures. For a lining you can trust, look no further than our range of proven Hempaline linings.

Acids, caustics, strong solvents and oil and water mixtures are highly corrosive to steel and concrete. Repairs and maintenance of tanks cause out-of-service down time resulting in loss of valuable time and revenue.

Hempaline linings have been designed to resist such aggressive elements, protecting your assets and maintaining purity of the content of the tank.

With rapid curing, our Hempaline high performance linings will get your asset back in service quicker - in as little as 24 hours.

Features	Value to the customer
High performance linings based on rigorous testing and real life applications	Long service life of assets, as well as less maintenance and repainting
Rapid cure systems	Reduced cost of out-of-service down time through faster return to service of assets
Local linings manufacturing and technical support	Fast delivery and on-site support when needed
High solids linings, colour indicator catalyst and standard application equipment	Single coat application and reduced mixing errors saves time in application of linings, and no need for special equipment

Fast return to service

A major Middle Eastern gas production facility needed to reline an internal tank bottom. The tank was taken out of service ready for it to be prepared and a new lining installed.

Due to Hempel's local manufacturing and stock we delivered in time for the project to be successfully completed on time and the unit quickly returned to full production.

“This has helped our projects department and contractor to complete the internal painting and handover of the tank to operations without much delay. Thank you for your prompt solution to our issues.”

Specialist (Project Coordination)
Operation projects department

Since 1915 Hempel has been a world-leading coatings specialist, providing protection and inspiration to the world around us. Today we have over 5,500 people in 80 countries delivering trusted solutions in the protective, decorative, marine, container, industrial and yacht markets. This includes many recognised brands like Crown Paints, Schaeppman and Jones-Blair.

Hempel is proudly owned by the Hempel Foundation, which supports cultural, humanitarian and scientific causes across the world.
